

PAVAN WAKADE

Java Full Stack Developer

+91 8802896767 | pavanwakade33@gmail.com | Pune, India

PROFESSIONAL SUMMARY

Java Full Stack Developer with 4+ years of experience in designing, developing and deploying scalable enterprise applications using Java, Spring Boot, Microservices, Hibernate/JPA and React.js. Strong expertise in RESTful APIs, cloud deployment on AWS, Docker containerization, Kubernetes orchestration and Agile/Scrum methodologies. Proven track record of delivering high-performance, production-grade solutions with measurable improvements in efficiency, scalability and code quality.

TECHNICAL SKILLS

- **Programming Languages:** Java 8/11/17, JavaScript, TypeScript
- **Backend Technologies:** Spring Boot, Spring MVC, Microservices, Hibernate, JPA, RESTful APIs, JDBC
- **Frontend:** React.js, Angular 14, HTML5, CSS3, Bootstrap
- **Databases:** MySQL, PostgreSQL, Oracle, MongoDB
- **Messaging & Caching:** Kafka, Redis
- **DevOps & Tools:** Docker, Kubernetes, AWS EC2, Jenkins, CI/CD Pipelines
- **Version Control & Tools:** Git, Bitbucket, Maven, Jira, Datadog, ServiceNow
- **Servers:** Apache Tomcat, JBoss
- **Testing:** JUnit, Swagger, Postman
- **Concepts:** OOP, Design Patterns (MVC, Singleton, Factory), Collections, Multithreading, Agile/Scrum

PROFESSIONAL EXPERIENCE

SDK Infotech Pvt. Ltd. | Java Full Stack Developer

Mar 2022 – Present

Project 1: Loan Management System

Project Description: The Loan Management System (LMS) is an enterprise-grade web application designed to automate and manage the complete lifecycle of loan processing for banks and financial institutions.

Roles and Responsibilities:

- Developed and maintained scalable RESTful APIs using Spring Boot and Java 17 for loan processing and repayment modules.
- Implemented business logic for loan eligibility validation, EMI calculation, interest computation, and repayment scheduling.
- Designed and integrated microservices architecture for customer, loan, payment, and notification services.
- Developed secure authentication and authorization mechanisms using JWT and Spring Security with Role-Based Access Control (RBAC).
- Integrated Apache Kafka for asynchronous event-driven communication between services.

Project 2: Online E-Commerce Platform

Project Description: Developed an enterprise-level online e-commerce platform that enables customers to browse products, manage shopping carts, place orders, make secure online payments, and track deliveries in real time. The platform supports vendor management, inventory tracking, order fulfilment, promotions, and analytics dashboards for large-scale online retail operations.

Roles and Responsibilities:

- Developed scalable RESTful APIs using Spring Boot and Java 17 for product catalog, cart, order management, inventory, and payment modules.
- Implemented microservices architecture for customer, product, order, payment, and notification services.
- Developed shopping cart, checkout, order processing, and shipment tracking functionalities.
- Integrated secure authentication and authorization using JWT, OAuth2, and Spring Security.
- Implemented asynchronous event-driven communication using Apache Kafka for order events, notifications, and inventory synchronization.

EDUCATION

B.E(Electronics and Telecommunication Engineering)

Pune University

Diploma (Computer Engineering)

MSBTE Mumbai
